

Stream Video Recorder

The Next Generation in Video Recording

The Alarm.com Stream Video Recorder (SVR) takes local video recording to the next phase of its evolution! Not only does the SVR boast the same 24/7 recording of a DVR and the network connectivity of an NVR, but it also adds automatic remote accessibility, mobile app compatibility and dynamic cloud management—creating a whole new class of video product.

The SVR is also optimized to be ultra-bandwidth efficient. By only using internet bandwidth for critical video playback and secure cloud recording, the SVR keeps your customer's internet pipe free. Your customers can also remotely connect to the SVR from the Alarm.com website and mobile apps for local and remote playback of gapless, continuous video recordings.

Installation is simple and similar to Alarm.com video camera set-up. One SVR can support up to 8 IP cameras or video servers and can record well over 1 month of continuous video.

The SVR Features:

24/7 video recording

Remotely access

Supports up to 8 cameras

Continuous local recording

Over 15 & 30 days of recording

1 & 2 TB options

Sync'd multi-camera playback

Multiple SVR addition availability

Visit the Alarm.com Dealer Website to access installation and support resources.
For questions about continuous recording with the SVR, please contact support@alarm.com.
